

Claim a Sudoku-like set of local constraints

1				
		4		
				6
	3			

Verifier checks ONE random constraint

5	1	7	2	6
3	6	2	4	1
8	5	4	6	7
6	3	1	5	2
2	4	8	7	5

Honest execution satisfies every constraint; a false claim satisfies $< 1\%$.
A single random check therefore exposes the lie with overwhelming probability.
